C. WHAT ARE THE INVESTMENT STRATEGIES?

The AMC will construct the portfolio using bottom up approach and will have the flexibility to invest across the market capitalization. The investment environment, valuation parameters and other investment criteria will determine the allocation and the investment style. The AMC will conduct in-house research in order to identify investable ideas. AMC will evaluate appreciation potential of individual stocks from a fundamental perspective, assess industry and company fundamentals, robustness of business model, sustainability of moat, valuations, quality of management, corporate governance standards etc. The Scheme will have reasonably well diversified Portfolio without being overly diversified.

Portfolio Turnover
Portfolio turnover is the aggregate volume of purchases and sales as a percentage of the corpus of the Scheme during a specified period of time. The portfolio turnover in the Scheme will be a function of inflows, outflows as well as market opportunities available to the Fund Manager. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolios. It will be the endeavor of the Fund Manager to keep the portfolio turnover rates as low as possible. Active asset allocation would impact portfolio turnover. There may be trading opportunities that present themselves from time to time, where in the opinion of the fund manager, there is an opportunity to enhance the total returns of the portfolio. The fund manager will endeavor to balance the increased cost on account of higher portfolio turnover, if any, with benefits likely to be derived from such an approach.

Borrowing by the Fund

The Scheme may borrow monies to meet temporary liquidity requirements for the purpose of repurchase or redemption of Units or the payment of interest or IDCW to the Unit holders. However, such borrowing shall be restricted to 20% of the net assets of the Scheme and for a maximum period of six months. The limit of 20% may be revised by the Fund and to the extent the Regulations may permit.

The Fund may raise such borrowings, secured or unsecured, from any person or entity as it may deem fit, including Sponsor or Shareholders of any of their associate / group / affiliate entities or banks, after approval by the Trustee, at market related rates.

Stock Lending by the Fund

Stock Lending involves lending of securities to another person or entity for a fixed period of time, at a negotiated compensation in order to enhance returns of the portfolio. The Fund can temporarily lend, through an approved intermediary, securities held by the Scheme to reputed counterparties, for a fee, subject to internal norms, if any. This would enable generating better returns on those securities, which are otherwise bought with the intention of holding the same for a longer period of time. The securities lent will be returned by the borrower on the expiry of the stipulated period or the lender can call the same back before its expiry.

The AMC will follow regulatory restrictions as may be prescribed in carrying on the activities of Stock lending. Such lent stock, while they are on-lending, will not be available for sale, and this can result in temporary illiquidity.

The Fund Manager may engage in Stock Lending as per following limits:

• Not more than 20% of the net assets of the Scheme can generally be deployed in Stock Lending.

• Not more than 5% of the net assets of the Scheme can generally be deployed in Stock Lending to any single counter party.

PART III- OTHER DETAILS

A. COMPUTATION OF NAV

The NAV of the Units of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date. The Fund shall value its investments according to the valuation norms, as specified in Seventh Schedule of the Regulations, or such norms as may be prescribed by SEBI from time to time.

All expenses and incomes accrued up to the valuation date shall be considered for computation of NAV. For this purpose, major expenses like management fees and other periodic expenses would be accrued on a day to day basis. The minor expenses and income will be accrued on a periodic basis, provided the nondaily accrual does not affect the NAV calculations by more than 1%.

Any changes in securities and in the number of units be recorded in the books not later than the first valuation date following the date of transaction. If this is not possible given the frequency of the Net Asset Value disclosure, the recording may be delayed upto a period of seven days following the date of the transaction, provided that as a result of the non-recording, the Net Asset Value calculations shall not be affected by more than 1%.

In case the Net Asset Value of a scheme differs by more than 1%, due to non - recording of the transactions, the investors or scheme/s as the case may be, shall be paid the difference in amount as follows:-

(i) If the investors are allotted units at a price higher than Net Asset Value or are given a price lower than Net Asset Value at the time of sale of their units, they shall be paid the difference in amount by the scheme.

(ii) If the investors are charged lower Net Asset Value at the time of purchase of their units or are given higher Net Asset Value at the time of sale of their units, asset management company shall pay the difference in amount to the scheme. The asset management company may recover the difference from the investors.

NAV of units under the Scheme shall be calculated as shown below:

NAV (Rs.) =

Market or Fair Value of Scheme's investments	+	**Current Assets including Accrued Income**	-	**Current Liabilities and Provisions including accrued expenses**

No. of Units outstanding under Scheme

The NAV of the Scheme will be calculated upto four decimal places and will be declared on each business day. The valuation of the Scheme's assets and calculation of the Scheme's NAV shall be subject to audit on an annual basis and shall be subject to such regulations as may be prescribed by SEBI from time to time.

Illustration:
Assume that the Market or Fair Value of Scheme's investments is Rs. 1,00,00,000; Current asset of the scheme is Rs. 25,00,000; Current Liabilities and Provisions is Rs. 15,00,000 and the No. of Units outstanding under the scheme are 5,00,000. Thus, the NAV will be calculated as:

$$\text{NAV} = \frac{10000000 + 2500000 - 1500000}{500000} = 22.0000$$

Therefore, the NAV of the scheme is Rs. 22.0000

While determining the price of the units, the mutual fund shall ensure that the repurchase price of an open ended scheme is not lower than 97 per cent of the Net Asset Value.

Valuation of the scheme's assets, calculation of the scheme's NAV and the accounting policies & standards will be subject to such norms and guidelines that SEBI may prescribe from time to time. For the detailed Valuation Policy and the accounting policy of the AMC, please refer the Statement of Additional Information.

Repurchase/ Resale is at Net Asset Value (NAV) related prices with repurchase/ resale loads as applicable (within limits) as specified under SEBI Regulations 2026, While determining the price of the units, the fund will ensure that the repurchase price is not lower than 97 per cent of the Net Asset Value.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

Sale Price:

Sale price is a price at which the fund house sells / offers mutual fund units to investors; this is nothing but the NAV of the respective Scheme of Mutual Fund. For investor who wants to invest in Mutual Fund, the units are offered at NAV of the respective Scheme of Mutual Fund.

For Example – If investor A wants to invest Rs. 5,000/- in XYZ Scheme of Mutual Fund. The NAV of Mutual Fund Scheme XYZ is Rs. 15 per unit. Investor's Investments & Mutual Fund unit allocation in Scheme XYZ is calculated as follows:-

Investment of Investor A = Investment Amount / Sale Price
= 5,000 / 15
= 333.3333 units

This means investor A will be allocated 333.3333 units of Mutual Fund Scheme XYZ.

Repurchase Price:

Repurchase price is a price at which fund house repurchases the mutual fund units back from the investor. For investor who wants to redeem his mutual fund units, the units are repurchased at respective scheme NAV less Exit Load (If Applicable)

For Example - If Mutual Fund Scheme XYZ is having NAV of Rs. 15 & Exit Load of 1% then the repurchase price would be calculated as follow:

Repurchase Price = NAV *(1- Exit Load %)
= 15 *(1-0.01)
= 14.8500

This means the investor will realise Rs. 14.8500 per unit if he redeems from Mutual Fund Scheme XYZ.
In case of no exit load the NAV & repurchase price are same.

The repurchase price of an open ended scheme shall not be lower than 97% of the NAV.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI

B. Risk Factors

1. Standard Risk Factors:

• Investment in Mutual Fund units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
• As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the scheme can go up or down depending on various factors and forces affecting capital markets and money markets.
• Past performance of the Sponsor(s)/ AMC/ Mutual Fund does not guarantee the future performance of the Scheme.
• The name of the Scheme does not in any manner indicate its quality or its future prospects and returns.
• The Sponsor(s) are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh each made by it towards setting up the Fund.
• The present scheme is not a guaranteed or assured return scheme. In addition, the scheme does not guarantee or assure any Income distribution cum Capital Withdrawal (IDCW) and also does not guarantee or assure that it will make any IDCW distribution, though it has every intention to make the same in the distributions of Income Distribution cum Capital Withdrawal option. All IDCW distributions of Income Distribution cum Capital Withdrawal will be subjected to the investment performance of the Scheme.

2. Risk factors associated with scheme's strategy

- Lack of opportunity to invest in arbitrage portions in the equity market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- While future market are typically more liquid than underlying cash market, there can be no assurance that ready liquidity would exists at all point in time for scheme to purchase and close out specific future contract.
- In case of arbitrage, if futures are allowed to expire with corresponding buy/sell in cash market, there is a risk that price at which futures expires, may/may not match with the actual cost at which it is bought/sold in the cash market in last half an hour of the expiry day (Weighted average price for buy or sell).
- The Scheme is also expected to have a high portfolio churn, especially in a volatile market. There is an execution risk while implementing arbitrage strategies across various segments of the market, which may result in missed investment opportunities, or may also result in losses.
- In case of a large outflow from the Scheme, the Scheme may need to reverse the spot-futures transaction before the settlement of the futures trade.
- While reversing the spot-futures transaction on the Futures & Options settlement day on the exchange, there could be a risk of volume-weighted-average-price of the market being different from the price at which the actual reversal is processed resulting in basis risk.

3. Risk factors associated with investment in Equity and Equity related instruments

- The Scheme proposes to invest in equity and equity related securities. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of Indian financial markets

have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities' purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon. The inability to sell securities held in the Scheme's portfolio, due to the absence of a liquid secondary market, would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

4. **Risk associated with Money Market Instruments:**

Interest - Rate Risk

Fixed Income and Money Market Instruments run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. The extent of rise or fall in the price is a function of existing coupon, days to maturity, increase or decrease in the level of interest, credit quality, demand and supply. However, in case of Government securities credit risk remains zero, their prices are influenced by the movement in interest rates in the financial system.

Credit Risk
Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may be affected because of change in the credit rating of the issuer/instrument and the price of a security goes down if the credit rating agency downgrades the rating of the issuer. In case of Government Securities, there is minimal credit risk to that extent. Lower rated or unrated securities are more likely to react to developments affecting the market and credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated or unrated securities also tend to be more sensitive to economic conditions than higher rated securities.

Liquidity or Marketability Risk

The ability of the Scheme to execute sale/purchase order is dependent on the liquidity or marketability. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances. Securities which are not quoted on the stock exchange(s) may be illiquid and can carry higher liquidity risk in comparison with securities which are listed on the stock exchange(s) and offer exit option to the investor including put option. The Scheme would invest in the securities which are not listed but offer attractive yields. This may however increase the risk of the portfolio.

Re-investment Risk
This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.

5. **Risk Factor associated with investing in Securities Segment and Tri-party Repo trade settlement Clearing Corporation of India Ltd. ('CCIL')** is providing clearing and settlement services, for Triparty Repo trades in Government Securities, under its Securities Segment. CCIL would act as a Central Counterparty to all the borrow and lend Triparty Repo trades received by it for settlement. CCIL would also be performing the role responsibilities of Triparty Repo Agent, in terms of Repurchase transactions (Repo) (Reserve Bank) Directions, 2018 as amended from time to time. CCIL would settle the Triparty Repo trades, in terms of its Securities Segment Regulations. The funds settlement of members is achieved by multilateral netting of the funds position in Triparty Repo with the funds position

in Outright and Market Repo and settling in the books of RBI for members who maintain an RBI Current Account. In respect of other members, funds settlement is achieved in the books of Settlement Bank. Securities settlement for Triparty Repo trades shall be achieved in the Gilt Account of the Member maintained with CCIL. Securities obligation for outright and market repo trades shall be settled in the SGL / CSGL account of the Member with RBI. Groww Mutual Fund is a member of securities segment and Tri-party Repo trade settlement of the CCIL. Since all transactions of the Fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL, it reduces the settlement and counterparty risks considerably for transactions in the said segments. To mitigate the potential losses arising in case any member defaults in settling the transactions routed through CCIL, CCIL maintains a Default Fund. CCIL shall maintain two separate Default Funds in respect of its securities segment, one to meet the losses airing out of any default by its members from outright and repo trades and other for meeting losses arising out of any default by its members from Triparty Repo trades. In case any clearing member fails to honor his settlement obligations, the Default Fund is utilized to complete the settlement applying the Default Waterfall Sequence. As per the said waterfall mechanism, after the defaulter's margins and defaulter's contribution to default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution, if there is still a loss to be met, then contribution of non-defaulting members to Default Fund is utilized to meet the said loss. The Scheme is subject to the risk of losing initial margin and contribution to Default Fund in the event of failure of any settlement obligation. Further the Scheme's contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). Further, CCIL periodically prescribes a list of securities eligible for contribution as collaterals by members. Presently, all Central Government Securities and Treasury Bills are accepted as collaterals by CCIL. The above risk factor may undergo a change in case the CCIL notifies securities other than Government of India Securities as eligible for contributions as collateral.

6. **Risks associated with segregated portfolio**
Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
Security comprises of segregated portfolio may not realize any value.

Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

Systematic Risk
The scheme is exposed to systematic risks that affect the entire market, such as economic recessions, changes in interest rates, geopolitical tensions, and natural disasters. These risks cannot be mitigated through diversification, and any negative macroeconomic developments could impact the overall performance of the scheme.

Legal and Regulatory Risks
Changes in laws, regulations, or accounting standards governing the scheme's operations could have adverse implications for the scheme and its investors. Regulatory actions, legal disputes, or changes in taxation could also affect the scheme's performance, NAV, and the investors' returns.

7. **Risks associated with investments in derivatives:**
   - The Scheme may invest in derivative products in accordance with and to the extent permitted under the Regulations and by RBI. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.

- The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility to the values.
- Investment in derivatives also requires the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.
- The Scheme may face execution risk, whereby the rates seen on the screen may not be the rate at which the ultimate execution of the derivative transaction takes place.
- The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances. For example, when there are insufficient bids or suspension of trading due to price limit or circuit breakers, the Scheme may face a liquidity issue.
- The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However the gains of an options writer are limited to the premiums earned.
- The exchange may impose restrictions on exercise of options and may also restrict the exercise of options at certain times in specified circumstances and thiscould impact the value of the portfolio.
- The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price.
- Investments in index futures face the same risk as the investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks.
- The Scheme bears a risk that it may not be able to correctly forecast future market trends or the value of assets, indices or other financial or economic factors in establishing derivative positions for the Scheme.
- The risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and the potential high volatility of the futures markets
- There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. The counter party may default on a transaction before settlement and therefore, the Scheme is compelled to negotiate with another counterparty at the then prevailing (possibly unfavourable) market price.
- Derivatives also carry a market liquidity risk where the derivatives cannot be sold (unwound) at prices that reflect the underlying assets, rates and indices.
- Where derivatives are used for hedging, such use may involve a basis risk where the instrument used as a hedge does not match the movement in the instrument/underlying asset being hedged. The risk may be inter-related also e.g. interest rate movements can affect equity prices, which could influence specific issuer/industry assets.
- Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor.
- Execution of investment strategies depends upon the ability of the fund manager(s) to identify such opportunities which may not be available at all times. Identification and execution of the strategies to be pursued by the fund manager(s) involve uncertainty and decision of fund manager(s) may not always be profitable. No assurance can be given that the fund manager(s) will be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

8. Risk associated with Securities Lending

- Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of

rights to the collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.

To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.

Risk Mitigation

Type of Risks	Measures/ Strategies to control risks
Equity Markets/ Equity Oriented Instruments	The Scheme is actively managed and may invest across large cap, mid cap and other permitted equity and equity related securities. The investment team will undertake fundamental research, company and industry analysis, financial analysis and valuation assessment before making investment decisions. Portfolio diversification, issuer and sector exposure monitoring, liquidity monitoring and adherence to applicable regulatory and internal exposure limits will be used to manage portfolio risks. However, such measures cannot eliminate market risk or the possibility of loss. •• Liquidity Risks: As such the liquidity of stocks that the scheme invests into could be relatively low. The scheme will endeavor to maintain a proper asset-liability match to ensure redemption payments are made on time and not affected by illiquidity of the underlying stocks.
Money Market instruments	Credit Risk: Management analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken. • Price-Risk or Interest-Rate Risk: The Scheme may primarily invest the debt portion of the portfolio in money market instruments, units of Liquid and Overnight schemes thereby mitigating the price volatility due to interest rate changes generally associated with long-term securities. • Risk of Rating Migration: The Scheme may primarily invest the debt portion of the portfolio in short-term money market instruments, units of Liquid and Overnight schemes thereby mitigating the risk of rating migration generally associated with long-term securities • Basis Risk: The debt allocation of scheme is primarily cash management strategy and such strategy returns are expected to reflect the very short term interest rate hence investment is done in short term debt and money market instruments. • Spread Risk: The Scheme may primarily invest the debt portion of the portfolio in short-term money market instruments, units of Liquid and Overnight schemes thereby mitigating the risk of spread expansion which is generally associated with long-term securities

	• Reinvestment Risk: The debt allocation of scheme is primarily cash management strategy and such strategy returns are expected to reflect the very short term interest rate hence investment is done in short term debt and money market instruments. Reinvestment risks will be limited to the extent of debt instruments, which will be a very small portion of the overall portfolio value. • Liquidity Risk: The Scheme may invest in government securities, corporate debt securities and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate debt securities may be low, it may be high in case of medium to long maturity corporate debt securities. The Scheme may, however, endeavor to minimize liquidity risk by primarily investing the debt portion of the portfolio in relatively liquid short-term money market instruments, units of Liquid and Overnight schemes.
Derivatives	The Scheme may take an exposure to equity derivatives of constituents or index derivatives of the underlying index for short duration when securities of the index are unavailable, insufficient or for rebalancing at the time of change in index or in case of corporate actions, as permitted. All derivatives trade will be done only on the exchange with guaranteed settlement. Exposure with respect to derivatives shall be in line with regulatory limits and the limits specified in the SID.
Securities Lending	The SLB shall be operated through Clearing Corporation/Clearing House of stock exchanges having nation-wide terminals who are registered as Approved Intermediaries (AIs).” The risk is adequately covered as Securities Lending & Borrowing (SLB) is an Exchange traded product. Exchange offers an anonymous trading platform and gives the players the advantage of settlement guarantee without the worries of counter party default. However, the scheme may not be able to sell such lent securities during contract period or have to recall the securities which may be at higher than the premium at which the security is lent.
Government securities and Triparty repo on Government securities or treasury bills:	As a member of securities segment and Triparty repo segment, maintenance of sufficient margin is a mandatory requirement. CCIL monitors these on a real time basis and requests the participants to provide sufficient margin to enable the trades etc. Also there are stringent conditions / requirements before registering any participants by CCIL in these segments. Since settlement is guaranteed the loss on this account could be minimal though there could be an opportunity loss.
Units of overnight & liquid mutual fund schemes	Liquidity is generally high in both overnight as well as liquid schemes.

While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated. The measures mentioned above is based on current market conditions and may change from time to time based on changes in such conditions, regulatory changes and other relevant factors. Accordingly, our investment strategy, risk mitigation measures and other information contained herein may change.in response to the same.

i. Futures:

Futures are exchange-traded contracts to sell or buy financial instruments for future delivery at an agreed price. There is an agreement to buy or sell a specified quantity of financial instrument on a designated future date at a price agreed upon by the buyer and seller at the time of entering into a contract. To make trading possible, the exchange specifies certain standardized features of the contract. A futures contract involves an obligation on both the parties to fulfill the terms of the contract.

SEBI has permitted futures contracts on indices and individual stocks with maturity of 1 month, 2 months and 3 months on a rolling basis. The futures contracts are settled on last Thursday (or immediately preceding trading day if Thursday is a trading holiday) of each month. The final settlement price is the closing price of the underlying stock(s)/index.

ii. Options:

Option is a contract which provides the buyer of the option (also called holder) the right, without the obligation, to buy or sell a specified asset at the agreed price on or upto a particular date. For acquiring this privilege, the buyer pays premium (fee) to the seller. The seller on the other hand has the obligation to buy or sell specified asset at the agreed price and for this obligation he receives premium. The premium is determined considering number of factors such as the market price of the underlying asset/security, number of days to expiry, risk free rate of return, strike price of the option and the volatility of the underlying asset. Option contracts are of two types viz:

iii. **Call Option –**

The option that gives the buyer the right but not the obligation to buy specified quantity of the underlying asset at the strike price is a call option. The buyer of the call option (known as the holder of call option) can call upon the seller of the option (writer of the option) and buy from him the underlying asset at the agreed price at any time on or before the expiry of the option.
The seller (writer of the option) on the other hand has the obligation to sell the underlying asset if the buyer of the call option decides to exercise his option to buy.
